

Consistent prefixes, lower forecast error

ETTh2 · LUFL · identical 720-step history · selected validation example

— Ground truth —●— DLinear H=96 —▲— DLinear H=336
— UVHF (one model) —■— DLinear H=192 —◆— DLinear H=720

MSE vs DLinear

H96: -26.1% H192: -75.5% H336: -78.1% H720: -70.7%

Mean cross-horizon disagreement: DLinear 0.46 units | UVHF 0 (identical prefixes)

MSE uses each complete horizon; disagreement averages 6 pairs over their full overlaps. Selected case, not a population estimate.
