

One forecast origin, four requested horizons

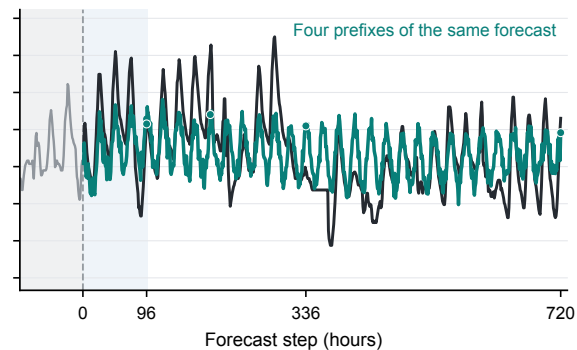

ETTh2 · OT · same 720-step input · selected validation example

— Ground truth — UVHF — DLinear H=96 — DLinear H=192 — DLinear H=336 — DLinear H=720

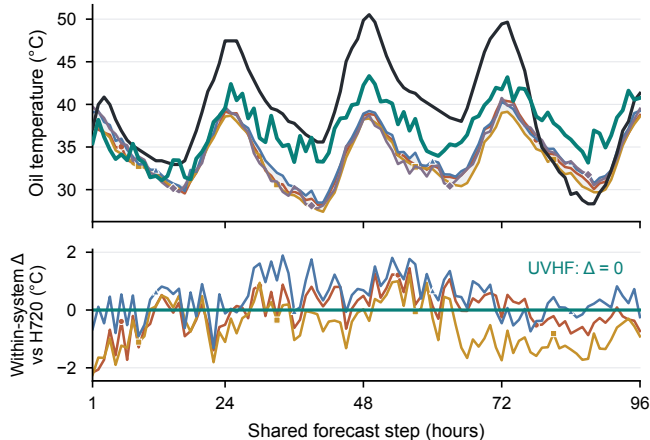

a DLinear: four independent models

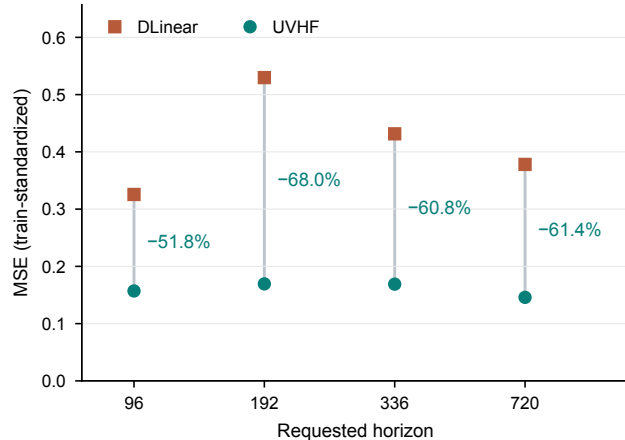

b UVHF: one unified trajectory

c A closer look at the shared first 96 steps

d Lower error at all four horizons

Cross-horizon disagreement (mean of 6 pairs): DLinear 0.70 °C | UVHF 0 (prefix identity)

Selected from 4,322 validation origin-variable pairs; illustrative, not a population estimate. No curve smoothing.
