

Consistent prefixes, lower forecast error

ETTm1 · HUFL · selected validation example

— Ground truth —●— TimeMixer H=96 —▲— TimeMixer H=336
— UVHF (one model) —■— TimeMixer H=192 —◆— TimeMixer H=720

MSE vs TimeMixer **H96: -62.9%** **H192: -55.5%** **H336: -65.6%** **H720: -45.8%**

Mean cross-horizon disagreement: TimeMixer 2.52 units | UVHF 0 (identical prefixes)

MSE uses each complete horizon; disagreement averages 6 pairs over their full overlaps. Selected case, not a population estimate.
