

Consistent prefixes, lower forecast error

ETTm1 · MUFL · selected validation example

— Ground truth — TimeMixer H=96 — TimeMixer H=336
— UVHF (one model) — TimeMixer H=192 — TimeMixer H=720

MSE vs TimeMixer

H96: -47.7% H192: -22.7% H336: -12.8% H720: -28.3%

Mean cross-horizon disagreement: TimeMixer 1.44 units | UVHF 0 (identical prefixes)

MSE uses each complete horizon; disagreement averages 6 pairs over their full overlaps. Selected case, not a population estimate.
