

Table 1: Core ablation of ISCF-BSCA. Each dataset entry is the mean over prediction horizons  $H \in \{96, 192, 336, 720\}$ . Lower is better. Best and second-best results are shown in bold and underlined, respectively; rankings use unrounded values.

| Variant                        | ETTm1        |              | ETTm2        |              | ETTh1        |              | ETTh2        |              | Weather      |              | Avg          |              |
|--------------------------------|--------------|--------------|--------------|--------------|--------------|--------------|--------------|--------------|--------------|--------------|--------------|--------------|
|                                | MSE          | MAE          | MSE          | MAE          | MSE          | MAE          | MSE          | MAE          | MSE          | MAE          | MSE          | MAE          |
