

a Sampled harmonic ribbon

recommended

field and target vector remain visible together

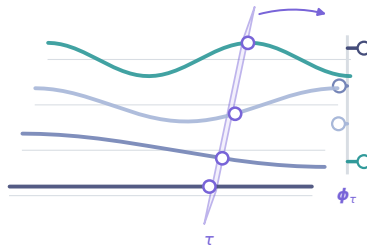

mean over $G_g^{(s)}$

$\overline{\phi}_g^{(s)}$

best semantic fidelity · low visual ambiguity

b Spectral fan

more dimensional, but perspective is interpretive

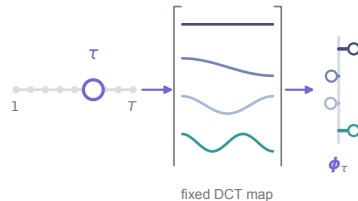

strong visual depth

risk: apparent geometric dimension

c Coordinate capsule

compact operator glyph for a narrow architecture row

fixed DCT map

$$\tau \mapsto \{\phi_{\tau, d}\}_{d=0}^{D_q-1}$$

highest compactness

trade-off: shared field is less explicit
