

Consistent prefixes, lower forecast error

ETTm1 · HUFL · selected validation example

Ground truth TimeMixer H=96 TimeMixer H=336
UVHF (one model) TimeMixer H=192 TimeMixer H=720

MSE vs TimeMixer H96: -46.0% H192: -32.3% H336: -30.8% H720: -21.3%

Mean cross-horizon disagreement: TimeMixer 0.82 units | UVHF 0 (identical prefixes)

MSE uses each complete horizon; disagreement averages 6 pairs over their full overlaps. Selected case, not a population estimate.
